

## Enjoy a Secure, Private Browsing Experience with VyprVPN for Mac

Published on 02/11/19

Users tired of the constant assault against their digital privacy and security will find it might be time to install a VPN on their computer to enjoy an anonymous and unrestricted browsing experience. Using VyprVPN for Mac is the safest and easiest way to secure your internet connection using any computing running MacOS. It operates entirely without third parties and was recently certified by an independent report.

Meggen - Did you know that connecting to the internet via an unsecured connection like an open wireless hotspot can leave your data at risk? With the right software, hackers can eavesdrop on your connection and intercept any data that hasn't been encrypted. However, if you are connecting via a VPN that encrypts all your data and provides an anonymous browsing experience, any data will be unintelligible to them.

Stopping eavesdroppers isn't the only security benefit afforded by a VPN. Since a virtual private network lets you browse the internet anonymously, websites can't collect any data about you. Furthermore, websites and online services will think that you're connecting from the place where the VPN server is located, which makes it great for navigating your way around geographical content restrictions.

Using VyprVPN for Mac is the safest and easiest way to secure your internet connection using any computing running MacOS. It operates entirely without third parties and was recently certified by an independent report. Golden Frog, the developers, handle everything from end-to-end. In addition to encrypting your connection, it also offers many useful time-saving features like per-app connections, automatic server connections and more.

VyprVPN for Mac is regularly updated to improve performance, fix bugs and add new features that help you stay securely connected to your favorite websites and online services. In November, VyprVPN was also certified by the independent organization No Log VPN demonstrating its capabilities to keep your data safe.

### Pricing and Availability:

VyprVPN for Mac is a free download and is available worldwide through the VyprVPN website. A subscription for service is available at the same website.
