

Personal Medical Record System App Officially Launches on App Store

Published on 02/12/19

Florida based developer, Key of Life App, LLC releases Key Of Life 1.3, a comprehensive medical record-keeping app for patients and their families. Key Of Life was specifically developed to provide anyone with a medical records storage option that can be shared with anyone. Users can maintain, record, track, and update their medical information, and share their records with family, loved ones, physicians, specialists, first responders, or anyone else of their choosing.

Fleming Island, Florida - Key of Life, a mobile application for patients to keep medical records in one place, has officially launched in the Apple Store and Google Play Store. Key of Life allows patients to take control of their healthcare by creating a single, digital location to store all information regarding medications, lab results, health history, radiology, and more, that can be shared with anyone they choose. Key Of Life's entrance into the app world dramatically improves the healthcare industry by enabling users to quickly access all medical records for a smooth transaction to their healthcare providers.

"The Key of Life app is on the forefront of medical technology and drastically improves EHR, EMR transactions," said Chad Anfinson, owner and CEO of Key of Life App, LLC. "Managing your family medical history can be cumbersome and stressful, but with Key of Life, parents can easily pull up their children's records with a touch of a button, adults can share their parents' medical information, and any caregiver can instantly access their loved ones' medical history."

Prior to Key of Life, patients would need to fax, email, or provide physical copies of their medical records and charts from different doctors to the corresponding physician's office. Key of Life allows patients to store, update, and organize all of their EHR and EMR on their mobile device.

A leading feature of Key of Life is the in-app purchase option that allows users to share patient profiles between family, physicians, specialists, first responders, or anyone else prior to attending their medical appointments. Patients can store their records via text or photo; and easily update, manage, and share. Using the Key of Life sharing feature, gives patients' family members, caregivers, and others access to their loved ones recent and past medical updates.

"Patients switch primary care doctors or visit specialists, but medical offices and healthcare providers do not have total, unrestricted access to outside records," said Anfinson. "Key of Life streamlines the patient/doctor experience by allowing the patient to have all of their medical records from every physician handy when attending doctor appointments."

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 8.0 or later
- * 37.7 MB

Pricing and Availability:

Key Of Life 1.3 is Free (With In-App Purchases) and available worldwide through the App Store in the Health & Fitness category. There is also an Android version available on Google Play. For more information, download the app or visit the official website.
