Tekton Technologies releases System Activity Monitors 3.7 for iOS

Published on 05/27/19

Tekton Technologies today announces System Activity Monitors 3.7, a comprehensive health check App for iOS devices. This useful App monitors the memory usage, battery life, and disk information. System Monitor helps to free memory and speed up the iOS device. It provides an easy-to-use, and visual graphical presentation of the entire device information as well as provides highly useful battery tips and memory tips. Version 3.7 offers improved performance, and now supports iPhone Xs and Xs Max.

Chennai, India - Tekton Technologies today announces System Activity Monitors 3.7, a comprehensive health check App for iOS devices. The App monitors the memory usage, battery life, and disk information. It provides a easy to visualize graphical presentation of entire device information and provides highly useful battery tips and memory tips.The iOS App monitors the memory in use, provides a real-time live graph view of the memory in use, frees up unused memory to speed up the iPhone, monitors battery life, disk information and other activities on the user's device. It also activates helpful alerts set by users, letting them know when their device's systems have reached certain limits.

Feature Highlights:
* Monitors used memory and frees unused memory of background Apps, by reclaiming the memory unused
* Excellent battery tips for increasing battery life.
* All the system information, like hardware specs and software specs in one place, that is quite easy to view.
* Real-time live graph of the memory in use.
* Used Space Pie-Chart and 3D bar graphs of used memory
* Useful battery life and time information
* Disk and device information, showing free and used space
* IP address acquired, hardware address and more
* Helpful alerts notify users when their iOS device reaches system limits

Upon opening the application, the user may watch as the speedometer in first tab, Memory in Use, decreases. This vivid display demonstrates the app freeing the device's memory and shows the user the amount of memory remaining in use. If they prefer, users may also double tap the speedometer display to view the memory break up in a handy bar graph in the same vivid colors.

The battery tab offers an engaging display, the color of which is alterable by the user, showing the percentage of battery charge remaining, as well as the time it will take to recharge the device at its current state. Tapping on the battery allows the user to view a comprehensive list of how long the user can expect to use the device for various purposes before charging will be necessary. Here, the user may also set his or her own Battery Health as well as the device's Low Battery Level; when the device reaches this level the app will remind the user to charge it.

The system info tab, provides a comprehensive and detailed information of your entire iPhone or iPad all in one place, without having to search for all of them.

Users may want to close out of some such processes they may not realize are draining battery. The Disk Information tab provides a pie chart displaying the amount of memory available and the amount currently used, providing the information in understandable percentages as well as megabytes. The device's personal settings are also available, making it easy for the user to locate the operating system, IP address, last boot, hardware address, and more.

System Monitor 3.7 provides a wide-ranging health check; this comprehensive App combines health monitoring functions usually reserved for individual, dedicated apps. The vibrant 3D visuals along with impressive sound effects enhance the health check experience, making it easy to use and enjoyable for all users.

Look no further!, "System Monitor - Battery Health, Free Memory and Used Space", features a rich and helpful program that you have never before experienced on your device. Check out the product page for more info.
