

Eltima releases Commander One 2.0 - High-level file management on macOS

Published on 06/26/19

Eltima Software announces Commander One 2.0, the latest version of their dual-panel file manager for macOS. Apart from file management functionality, the app features a built-in FTP client, allows mounting clouds including OpenStack, Box, Backblaze and Amazon S3-compatible storage solutions, accessing and editing data on iOS and Android devices, and more. Added the support for cloud encryption. Version 2.0 is more stable, much faster, has a number of additional features and improvements.

Frankfurt, Germany - Eltima Software today is proud to announce the release of Commander One 2.0, the newest version of their dual-panel file manager for Mac. It serves as a great alternative to Finder, Mac's default file manager, and other popular apps such as Total Commander for Windows and Android File Transfer for Mac. Commander One has already recommended itself as a great file management solution and has been acknowledged by a number of respected weblogs and portals. Here is what the new version of Commander One has to offer you:

Additions:

- * an ability to open and edit files stored on online connections
- * an ability to open and edit files in archives (except for RAR)
- * an ability to open and edit files on MTP and iOS devices
- * support for Box.com
- * support for Backblaze.com
- * a new type of connection for OpenStack Swift (Object Storage), with Keystone authentication services v.1 and v.2
- * an ability to choose server endpoint for Amazon S3
- * support for new regions in Amazon S3: cn-north-1 Beijing, eu-north-1 Stockholm
- * SSO support for OneDrive
- * Microsoft Cloud Germany (office.de) support for OneDrive
- * an ability to work with "Shared with me" folder on Google Drive
- * an ability to mount to WebDAV servers with untrusted HTTPS certificate
- * support for encryption on online connections
- * support for Dropbox Business
- * support for Google Team Drives
- * support for Finder Extensions (Dropbox, Google Backup and Sync, etc.)
- * support for Finder Tags
