

Boundary Labs releases Memoir 3

Published on 07/26/19

Boundary Labs is happy to announce availability of Memoir 3 through both our website and the Mac App Store. Memoir 3 is a total rewrite of the popular note taking and journaling software for macOS. It features a powerful organizer, calendar, and search that work together to help you keep organized. And, with a clean, elegant interface, Memoir makes for a distraction-free organizational experience that helps you work faster with keyboard shortcuts abound.

Houghton, Michigan - Boundary Labs is happy to announce availability of Memoir 3 through both our website and through the Mac App Store. Memoir 3 is a total rewrite of the popular note taking and journaling software for macOS. It features a powerful organizer, calendar, and search that work together to help you keep organized. And, with a clean, elegant interface, Memoir makes for a distraction-free organizational experience that helps you work faster with keyboard shortcuts abound.

Memoir is a clean, elegant interface to your notes. Store your notes the way you'd like. Similar to the Finder, the Organizer allows you to store notes in whatever structure works best for you. Memoir keeps track of how you organize each folder, so you can focus on taking notes.

The entire interface has been streamlined - most operations have keyboard shortcuts for quick access without leaving the keyboard.

Search is deeply integrated. Type in the search bar and the organizer collapses, showing just the information you're searching for. Or, search from anywhere using Spotlight.

Memoir keeps your data safe. Lock away your private data with a password or Touch ID to keep your data safe from prying eyes. Memoir uses industry standard strong encryption to make sure whatever data you want protected stays private.

Keep a focus on writing. A built in calendar shows you visually when notes were created, helping you to track down information quicker. It also gives you a birds-eye view of your writing activity, aiding you in making note-taking a consistent activity.

Memoir 3 provides a modern macOS experience. It features support for Dark Mode, Full Screen Mode, Touch ID and the Touch Bar, Spotlight, and many other new macOS technologies.

Memoir 3 is compatible with macOS 10.13 High Sierra and higher.
