

PDF Checkpoint Is Now Notarized by Apple: PDF Preflight, Conversion Tool

Published on 08/05/19

Zevrix Solutions announces PDF Checkpoint 1.8.9, a security update to company's PDF preflight and conversion solution. Remarkably fast, PDF Checkpoint automatically preflights, exports as images, splits and optimizes Adobe PDF files. The software can also convert PDF document colors, which helps users easily prepare files for print and web. The new version was updated to satisfy forthcoming macOS security demands and has now received the seal of approval issued by the Apple notary service..

Toronto (ON), Canada - Zevrix Solutions today announces PDF Checkpoint 1.8.9, a security update to company's PDF preflight and conversion automation tool. Remarkably fast, PDF Checkpoint automatically preflights, exports as images, splits and optimizes multiple Adobe PDF files. PDF Checkpoint is an ideal solution for users who need a fast, affordable and easy to use app to check PDF files for errors and convert them to the desired format and color space.

With the new version, PDF Checkpoint was updated to satisfy new security requirements on macOS 10.15 and has now received the seal of approval issued by the Apple notary service. According to Apple, notarization gives users more confidence that the Developer ID-signed software developers distribute has been checked by Apple for malicious components. These claims have not been independently verified yet. Beginning in the forthcoming macOS 10.15 Catalina, notarization is required by default for all Mac software.

"It's a great idea to enable color profile conversion in PDF files so easily," says Dr. Wolfgang Lorenz from Munich, Germany. "PDF Checkpoint saves me a lot of time when submitting ads for large magazines."

PDF Checkpoint is designed to automate and simplify PDF workflows of publishers, ad agencies, printers and graphic designers:

- * Batch preflighting and conversion of PDF files.
- * Preflight PDF fonts, colors, images and metadata.
- * Convert PDF color mode using ICC profiles.
- * Split files into single page PDFs.
- * Export PDF as images with specific resolution, color and page scale.

For example, users can preflight a folder of PDF files and convert them to TIFF images at 300 dpi while scaling each page by 50%. Users can also create print-ready PDFs from such apps as Apple Pages and Swift Publisher by converting colors to the recommended CMYK profile.

Pricing and availability:

PDF Checkpoint can be purchased on Mac App Store and Zevrix website for \$39.95 (USD), as well as from authorized resellers. The update is free to licensed users. Trial is also available for download. PDF Checkpoint requires macOS 10.7-10.14.
