

PhotoStory SX 1.1.1 is now available in the Mac App Store

Published on 08/20/19

Charlotte based developer, einstein's legacy introduces PhotoStory SX 1.1.1, a macOS application that converts images into video stories for use in promotions, storytelling and creating time-lapse visuals. The application features a simple user interface for organizing images, variable speed playback, movie previews, and modern codecs for encoding video output. Additionally, users can share their output movies with other applications and various video-centric internet services.

Charlotte, North Carolina - einstein's legacy v2.0, LLC announces the release and immediate availability of PhotoStory SX 1.1.1. PhotoStory SX converts images into video stories for use in promotions, storytelling and creating time-lapse visuals. The application features a simple user interface for organizing images, variable speed playback, movie previews, and modern codecs for encoding video output. Additionally, users can share their output movies with other applications and various video-centric internet services.

"PhotoStory was born out of our own need for a simple product that could transform a collection of images into a movie clip," says Douglas A. Welton, einstein's legacy Chief Product Officer. "We've kept the application simple. Adding only those features that help video content creators be most productive. This isn't a heavyweight application like Final Cut Pro X or Adobe Premiere. PhotoStory opens quickly and let's users get their task done so they can get to the next step in their workflow."

PhotoStory SX 1.1.1 includes the following key features:

Easy Organization - Drag'n'drop images into the desired order for output or sort the collection according to name or date.

Adjustable Speed - Set the playback rate by hand or choose from almost 20 frame-rate-based preset options.

Appearance - Control the background color and placement of images within the frame of the output movie.

Modern Codecs - Create new movies in a variety of formats (e.g., H.264, HEVC, etc.) for a range of playback situations.

Sharing - Share your output movie using Vimeo, Facebook and other popular internet services.

Transitions - Select from 8 different styles for rendering transitions from one image to the next.

System Requirements:

* Macintosh Computer and OS X 10.14 (Mojave)

Pricing and Availability:

PhotoStory SX 1.1.1 is available as a free download from the Mac App Store in the Photography category. Additional functionality to remove watermarked content is available via in-app purchases. Promo codes are available to members of the press. For more information, please contact Douglas A. Welton.
