

Tekton Technologies releases Swift Miles 1.4.7 - Popular Mileage Tracker

Published on 08/20/19

Tekton Technologies releases Swift Miles 1.4.7, an important update to their popular mileage tracker app for business users. To make mileage logging extremely simple and efficient, Swift Miles provides automatic trip detection, mileage logging and accurate route tracking, with the additional benefit of consuming less battery power. The app allows business users to review those miles using accurate routes of their trips and categorize them as Business, Charity, Medical and Personal.

Chennai, India - Tekton Technologies, today is proud to announce the release and immediate availability of Swift Miles 1.4.7, an important update to their popular mileage tracker app for business users. Swift Miles automatically detects and tracks every mile a user drives. The app allows business users to review those miles using accurate routes of their trips and categorize them as Business, Charity, Medical and Personal. Users can further sub-classify them based on names, so its easier to search on classification to maintain accurate records. Swift Miles also features single tap PDF report generation that can be sent via email to accountants for tax calculations.

"Our goal was to make an automatic mileage tracking app that lets users capitalize on the IRS mileage rates for tax deductions, in a way that is simple and easy to use. The users should never have to bother about whether a drive is being tracked and captured. It all happens magically in the background, while the users carry their iPhone in the car." says Tekton Technologies. In the Gig economy, more and more people are using their own vehicles for work than ever before. On an average, a business user will save around \$5,000 - \$6,000 per year on their taxes by using Swift Miles to accurately record their miles and classify their trips, and ride-share drivers working on Uber, Lyft, etc, save much more.

Battery consumption is always a worry when using functions like GPS in the background. Swift Miles uses optimized algorithms designed to limit the iPhone's GPS usage and surprisingly, the App consumes very little battery power.

Key Features Include:

- * Automatic mileage tracking - Tracks and logs mileage automatically in the background
- * Tax deduction - Uses the latest IRS mileage rates for deductions
- * Accurate route maps - Plots the actual route taken on a map
- * Auto-classify trips - Classify trips as business, charity, medical, or personal
- * Track trip expenses with image receipts for each trip
- * Custom reports - Email detailed trip reports in PDF format.
- * Low battery consumption, thanks to optimized tracking algorithms

Users receive a 2-week free trial of the premium automatic trip detection and unlimited mileage tracking. Afterwards, the free version of the app will provide 200 miles per month of automatic trip detection and tracking. A convenient in-app purchase unlocks unlimited automatic mileage tracking.

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 11.0 or later
- * 35.8 MB

Pricing and Availability:

Swift Miles - Mileage Tracker 1.4.7 is free and is available worldwide exclusively through the App Store in the Finance category. Convenient in-app purchases are available to enable unlimited automatic mileage tracking, \$39.99 per year for annual subscriptions or \$4.99
