SweetP Productions, Inc. releases Cookie 6.0 for macOS 10.14

Published on 08/27/19

Wilmington based SweetP Productions today announces Cookie 6.0, an important update to their advanced macOS cookie and privacy management app. After a quick initial setup, Cookie will protect your privacy, keeping you safe from tracking and online profiling just the way you want. Cookie is designed to run invisibly in the background - you can rest easy knowing that advertisers and marketers aren't tracking your every click.

Wilmington, Delaware - SweetP Productions today is proud to announce the release of Cookie 6.0, an important update to their advanced macOS cookie and privacy management app. Cookie gives you total control over all cookie storage types: HTTP cookies, Flash cookies, HTML5 databases, localStorage, IndexedDB as well as browser history and caches. Simple enough for even the most technophobic computer users, yet Cookie makes no compromises for power users. After a quick initial setup, Cookie will protect your privacy, keeping you safe from tracking and online profiling just the way you want.

There is nothing else quite like Cookie. Designed to run invisibly in the background - you can rest easy knowing that advertisers and marketers aren't tracking your every click.

You may not know this, but the website's you visit can store cookies in your browser without your knowledge or consent. Some are helpful, but others are frustrating and invasive. Cookie can help by inhibiting third parties from tracking and profiling you. Cookie is the ONLY cookie manager which gives you COMPLETE control over YOUR online privacy. Others try, but nothing comes close Cookie's deeply customizable privacy settings.

YOU decide which cookie's you want to keep, and exactly what you don't want - Cookie will clear the rest. Removal schedules and domain favorites can all be configured individually for each browser, or globally for all browsers. And because some Chrome based browsers support the use of multiple users, so does Cookie.

Features:
* Consolidate all your browser privacy settings
* Simplified View that takes care of all the technical details for you.
(OR)
* Advanced View which puts you in total control of all your privacy settings
* Combined cookie view displaying all cookie/flash/localStorage data in one easy to manage view
* Cookie's can be favorited on a per domain, or per cookie basis - You decide
* Individual Browser settings. It is possible to configure different automatic removal options for each browser - In the case of Chrome/Chromium/Canary/Brave you can even configure settings per user
* A number of removal schedules are possible: When quitting Cookie, when a Browser is Quit, on computer login, On computer waking from sleep, on a customizable time schedule, or entirely manually
* Hotkey support, so you can remove all unwanted data quickly and easily
* Customizable tracking cookie definitions
* Whitelist individual tracking cookies
* Clean, modern and Intuitive User Interface
* Helpful setup window
* Browser extension protection
* Full Screen support
* iCloud support
* Dark/Regular theme

Cookie supports all the popular browsers, including Safari, Safari Technology Preview, Chrome, Chrome Canary, Firefox, Firefox Nightly, Firefox Developer Edition, Chromium, Opera, Brave and Vivaldi.

Pricing and Availability:
Cookie 1.0 is available for purchase for $19.99 USD (or equivalent amount in other currencies) and available worldwide through the Mac App Store or via the SweetP Productions on-line store.
