

Mailbutler is Now Available on iPhone and Android Phone

Published on 09/10/19

Mailbutler today introduced its long-awaited mobile app to accompany their desktop email productivity extension for Apple Mail and Gmail on macOS. The mobile app serves as an information hub for all Mailbutler activity, keeping users updated wherever they go with real-time push notifications on their phones. Users can access Tracking Details, check or create new Tasks and Notes, and open emails quickly in their mobile email client. The app is free and available on iOS and Android.

Berlin, Germany - Mailbutler, provider of the leading email productivity software for Apple Mail and Gmail, announced a major release today introducing a mobile app that brings its email-enhancing features to mobile devices. The mobile app is extending the desktop version of Mailbutler, enabling users to access Tracking Details, check or create new Tasks and Notes, and open the emails quickly in their mobile email client.

"Emails are no longer something we work with only at our office desks, we need to be ready to respond to them wherever we are in order to communicate effectively and close sales. Having the opportunity to access Mailbutler activity on a mobile phone has been requested by a lot of our users, so we decided to tap into the mobile market and introduce Mailbutler for iOS and Android," said Tobias Knobl, CEO and cofounder of Mailbutler.

Through the Mailbutler mobile app, users can get a simple overview of their Mailbutler activity, including Tasks and Notes, snoozed and scheduled emails as well as the details of tracked emails - the features they used in the desktop version of Mailbutler. It takes just one click to open and read the relevant message enhanced with Mailbutler. This instant access to a user's email activity makes the mobile app a useful, compatible solution for business people on the go.
