

New App DuetCam Brings Front-And-Back Video Recording To Newer iPhones

Published on 10/08/19

Marcel Schmitz today releases DuetCam 1.1, an important update to his video recording app exclusively for newer iPhone devices. The all-new DuetCam has a polished and intuitive design that features recording with two cameras, the front-facing camera and any back-facing camera. Videos are saved directly to your library, similar as to the stock camera app - easily and effortlessly browse and play videos within the app and share your videos as an IG story directly from the app.

Porto, Portugal - Marcel Schmitz today is pleased to announce the release and immediate availability of DuetCam 1.1, an important update to his video recording app developed exclusively for newer iPhone devices. The all-new DuetCam has a polished and intuitive design that features recording with two cameras, the front-facing camera and any back-facing camera your device offers. Videos are saved directly to your library, similar as to the stock camera app - easily and effortlessly browse and play videos within the app and share your videos as an IG story directly from the app.

Version 1.1 brings in new features such as switching between front and back cameras while recording and also turning the flash light on and off. This version also fixes some bugs related to the recording of video files:

- * Choose a back-facing camera of your choice to record a movie with your front-facing camera
- * While recording, you can switch the front and back cameras as many times as you'd like
- * Record videos directly to your library
- * Browse videos and watch them directly on the app
- * Share them on social media within the embedded video player
- * Share your video directly to IG stories when Direct Share to IG is turned on

With the release of iOS 13, a new feature for recording video comes to newer iPhones, that allows recording video from both the front and back camera. Although this feature isn't implemented yet on the stock camera app, Apple decided to release this feature to all developers. Similar to what was introduced by the company behind FiLMiC Pro on Apple's iPhone 11 Pro keynote in September, DuetCam allows you to take advantage of the multi-cam right now, a feature that will be only available by FiLMiC Pro later this year. Future versions will include multiple camera layouts, shoot photos, apply effects and other features.

Device Requirements:

- * iOS 13 or later
- * 3.1 MB
- * Apple iPhone or iPad powered by the A12, A12 or A13 chip: iPhone XR, iPhone XS, iPhone XS Max, iPhone 11, iPhone 11 Max, the iPhone 11 Max Pro or the iPad Pro with A12 chip or better

Pricing and Availability:

DuetCam 1.1 is \$2.99 USD (or equivalent amount in other currencies) and available worldwide exclusively through the App Store in the Photo & Video category. Promo codes are available for members of the press. For more information, please contact Marcel Schmitz.
