Deliver Now Supports macOS Catalina: File Transfer With Email Receipts

Published on 11/07/19

Zevrix Solutions announces Deliver 2.6.14, a compatibility update to company's file transfer solution with automatic email notifications. Deliver lets users send files to FTP, SFTP, Amazon S3, WebDAV and other remote and local servers. The app offers automatic email delivery notifications, file encryption and compression, multi-destination transfer, upload history, and other powerful capabilities. The new version introduces support for macOS 10.15 Catalina in a free update to licensed users.

Toronto (ON), Canada - Zevrix Solutions today announces Deliver 2.6.14, a compatibility update to the company's file transfer solution with automatic email notifications. Deliver lets users send files over the Internet and local networks and offers file compression, delivery history, automatic PDF creation and other powerful capabilities. It supports FTP, SFTP, Amazon S3, WebDAV and other remote and local services, and allows to send files to multiple destinations at once.

The new version introduces support for the recently released macOS 10.14 Catalina and is offered as a free update to licensed users. Deliver has been notarized by Apple, which is a mandatory requirement on Catalina as part of Apple's experimental security policy.

"Deliver is a Mac app that comes close to fulfilling the laundry list of requirements," writes Natalia Nowak on Mac360, a Mac app reviews site. "It gives you a methodology and work flow to send files safely and securely to many users over the internet or to local, secure servers."

Deliver automatically notifies recipients of file deliveries by email, which eliminates the need to compose and send confirmations for each transfer manually. Users only need to drop their files on the program's icon to upload the documents to the desired destination. A customizable email confirmation will be automatically issued upon delivery. Recipients can download the file using a link in the notification email.

Deliver offers the following key features:
* Transfer files to FTP, Google Storage, Amazon S3 and other servers
* Automatic email notifications based on variable templates
* Compress files automatically (zip/dmg)
* Hyperlink to file for instant download by recipients
* Encrypt disk images with passwords
* Create lo-res PDF on the fly and attach to e-mail
* Transfer history

Pricing and Availability:
Deliver can be purchased from Zevrix website for $19.95 (USD), as well as from Apple Mac App Store and authorized resellers. Trial is also available for download. The update is free for licensed users of Deliver 2.x. Deliver requires macOS 10.8-10.15.
