

## Automated Access to FileMaker 19 Migrations with FmPro Migrator 9.13

Published on 10/19/20

California based .com Solutions Inc. today releases FmPro Migrator Platinum Edition 9.13 with support for FileMaker Pro 19. Users of Microsoft Access databases can solve their endemic data corruption and 2GB file size problems by upgrading to FileMaker Pro 19 with the release of FmPro Migrator Platinum Edition 9.13. FmPro Migrator is a stand-alone application which also migrates FileMaker Pro databases to MySQL, Oracle, Access, SQL Server, Sybase, DB2 and more.

Fremont, California - .com Solutions Inc. today is pleased to announce the release of FmPro Migrator Platinum Edition 9.13 with support for automated Microsoft Access to FileMaker Pro 19 conversions. FmPro Migrator Platinum Edition 9.13 enhances the Access to FileMaker 19 migration feature in the following ways:

- \* Relationships are created more accurately during the conversion process because all table/fields are now converted to be SQL compliant.
- \* Table occurrences are also standardized to use SQL compliant table/field names so that they get created correctly. The menu allowing manual selection of a TO base table now displays the converted base table names.
- \* The list of TOs displayed on the Layouts tab now uses the converted TO names when updating layout TO names manually.
- \* When performing an Access to FileMaker data transfer, the completion status now displays correctly after it has completed.
- \* On macOS and Windows, support has been added for creating layouts with FileMaker Pro 19.1.2 by changing the process which deletes layout parts before pasting the layout contents via the clipboard.

Converting legacy Microsoft Access databases to FileMaker Pro 19 offers many advantages including:

- \* Cross platform compatibility: FileMaker solutions run directly on macOS, Windows and IOS devices. WebDirect serves FileMaker custom apps to all mobile and desktop platforms running a supported web browser. Access can only run on the Microsoft Windows operating system.
- \* Easier database sharing: FileMaker database files can be shared using FileMaker Server or FileMaker Cloud with macOS, Windows and IOS devices. WebDirect serves FileMaker database files to any device or platform using any supported web browser.
- \* Improved reliability: Access database files require frequent maintenance to "compact and repair" the database. Sharing Access files on a network file share typically results in file corruption. FileMaker solutions don't have any of these problems and file sharing is reliably supported via FileMaker Server or FileMaker Cloud.
- \* Greatly enhanced file capacity: FileMaker supports a 7TB filesize compared with the anemic 2GB Access filesize limit. If the Access database file ever exceeds the 2GB file size limit, it will immediately become corrupted.
- \* Easier Development: Upgrading to FileMaker Pro 19 also offers developers the opportunity to take advantage of the latest design, development and security features included with
