Graphic Inspector Now Supports macOS Big Sur: Image Preflight Tool

Published on 10/20/20

Zevrix Solutions announces Graphic Inspector 2.4.10, a compatibility update to company's quality control solution for images and vector graphics files. Graphic Inspector can flag images and Illustrator files with specific attributes such as resolution, color, spot channels, fonts and more. The app is the only tool on the Mac market that preflights both raster images and vector files for potential issues. The new version makes Graphic Inspector compatible with the forthcoming macOS 11 Big Sur.

Toronto (ON), Canada - Zevrix Solutions today announces the release of Graphic Inspector 2.4.10, a compatibility update to company's quality control solution for images and vector graphic files. The software solves the problem of checking entire folders of documents for potential problems according to specific workflow requirements. Graphic Inspector is the only tool on the market that lets the graphics industry professionals inspect both raster images and Adobe Illustrator documents.

The new version introduces support for the forthcoming macOS 11 Big Sur which is currently available as public beta and is scheduled for release by Apple later this fall. The update ensures reliable performance on the new operating system and adjusts the appearance of certain UI elements to accommodate the changes in Big Sur graphic interface. The update is offered free of charge to licensed users and maintains support for earlier system versions down to macOS 10.8.

Graphic Inspector is designed to help users of any trade, whether it's print, web design, prepress, or digital photography. For example, users can quickly locate files whose color mode is RGB, format - TIFF, resolution is below 300 dpi, ICC profile is "US Web Coated" and so on. The app offers the following key features:

* Check multiple images and vector files for potential problems
* Customizable checkup presets
* Professional prepress checks: spot colors, fonts in vector files, image compression and more
* Common checks such as resolution, color mode, ICC profile
* Search image EXIF, IPTC and GPS metadata

"Graphic Inspector displays every bit of useful information about vector or raster graphic files and flags the ones that match rules you define," writes Jay Nelson in Layers magazine. "With its combination of price, utility, and thoughtful design, Graphic Inspector is a rare gem."
