

Saving Daylight - An App That Rages Against the Dying of the Light

Published on 10/27/20

California based indie developer 359 North Inc. announces Saving Daylight, its new app for iOS devices. Saving Daylight offers quick access to how much sunlight is left today at any location on Earth, along with comprehensive solar data for any time or place on the planet. Users can easily search by name, search Contacts, or search a map to find places they want to check. Easily explore the entire planet, compare, contrast, create videos and check out reports.

San Rafael, California - Independent developer 359 North Inc. is proud to announce the release and availability of Saving Daylight, its new app for iPhone, iPad, and iPod touch devices. Ever get in trouble for coming home after dark? Saving Daylight can help you avoid that troubling situation.

Get alerts the way you want them for sunrise, noon, and sunset. If you're curious, you can explore the entire planet, compare, contrast, create videos and check out reports. But at its heart, Saving Daylight gives you a clear, unambiguous readout of the light you've got left when you're outdoors.

- * Going hiking, biking, or outdoors for any reason? Plan and manage your activity
- * Moving to a new city? Get the low-down on sunlight in your new digs
- * Real Estate Agent? Show the benefit of your area's sunlight to prospective residents
- * Just like cool stuff? Check out the light ring videos when you tap on the big ring

On the main view the light ring gives you a quick readout for your current location, and a quick swipe left or right takes you to other locations of interest for the same solar data. Below the light ring a table presents all the particular data of the location in view.

If you tap the light ring, you get an explosion of fun detail: compare two different locations, explore a location, make a movie, and generate a report suitable for printing that gives a year-round description of your selected location, and compares it to other locations around the globe.

Localized into six additional languages besides American English: Simplified Chinese, French, German, Japanese, Polish, and Spanish.

Device Requirements:

- * iPhone, iPad, and iPod touch
- * iOS 13.0 or later
- * Universal Application
- * 10.9 MB

Pricing and Availability:

Saving Daylight is free and is available worldwide exclusively through the App Store in the Utilities category.
