

MacX YTB Downloader Adds Proxy Server to Access & Grab Blocked YTB Video

Published on 10/29/20

Digiarty Software, Inc. today announces MacX YTB Downloader for macOS. With MacX YTB Downloader, users can download video from Facebook, YTB, Instagram, and 300+ other sites in high definition and fast speed. This update includes fresh proxy server support and regular kernel enhancement, addressing the private YouTube video, Watch Later playlist and blocked videos not available for downloading issues for some users.

Chengdu, China - Digiarty Software, Inc. (MacXDVD) has made a major update to its MacX YTB

Downloader in response to the recent video download failure issue. This update includes fresh proxy server support and regular kernel enhancement, addressing the private YouTube video, Watch Later playlist and blocked videos not available for downloading issues for some users.

The newly updated MacX YTB Downloader is built with proxy server support, which acts as a gateway between users and the internet. Instead of connecting to YouTube server directly, the client creates a connection to the proxy server built in MacX YTB Downloader and requests for the appointed resource on YouTube site. This keeps users' personal information and browsing habit more private, and also allows them to access and even grab the blocked resources of YouTube in current area.

This MacX online video grabber also makes an enhancement of the kernel algorithm, which grabs and analyzes the source video URL address faster, and acquires the video file with full information accurately. It solves YouTube video analysis failure owing to the instability of the software greatly. Besides, some small bugs are also fixed in the latest version of the program.

Beyond that, if you failed to parse encrypted or blocked YouTube video previously, the new version YTB downloader can easily parse them in coordination with the proxy server.

In brief, MacX YTB Downloader v5.1.6 has improved all-round:

- * Grab any YouTube contents, including YouTube playlists, private video, or blocked video in whatever format and resolution
- * Auto detect YouTube videos opened in browser. And save video offline from YouTube and 300+ sites
- * Acquire YouTube video in batch thanks to multi-threading and batch downloading tech - And it makes a reasonable layout of CPU usage and network bandwidth while downloading to ensure the smooth running of other tasks on macOS

Certainly, everything complicated is in the software background. For users, the only thing is to set the proxy port according to the type of the proxy server. Then it's all the same with the regular downloads: Parse the video URL address and download the video.

Pricing and Availability:

MacX YTB Downloader is a free video downloader for Mac users to save videos offline from YouTube, Facebook, Dailymotion, and 300 sites. This 100% safe and clean YouTube downloader is available on macOS Catalina or earlier, tracing to Mac OS X 10.5. Get the free MacX YTB Downloader now?

If you'd like to convert the offline YouTube videos, you can move to its advanced edition, MacX Video Converter Pro, which enables customers to download and convert YouTube videos freely. This software is normally priced at \$59.95 (USD), but now you can get it at \$29.95 in MacXDVD Special Offer activity. Take your chance! Opportunity knocks but once.
