

Heart Reports V2.0 for iPhone helps you generate detailed health reports

Published on 01/31/21

Indie developer, Peter Viszt today released Heart Reports V2.0 for iPhone. With Heart Reports, you can generate detailed PDF reports about your health based on the data stored in the Health app on your iPhone which you can easily share with your doctor. The app takes advantage of the data captured by a user's Apple Watch and other smart health devices, like blood pressure monitors & blood glucose meters, but users can input data manually as well.

Budapest, Hungary - Peter Viszt today released Heart Reports V2.0 for iPhone(R). With Heart Reports, you can generate detailed PDF reports about your health based on the data stored in the Health app on your iPhone which you can easily share with your doctor.

Version 2 of Heart Reports introduces new report types: heart rate, blood pressure, blood sugar, activity, sleep and blood oxygen. Each report contains various graphs, charts and other connected data, like nutritional intake, body temperatures, averages, classifications and more.

Another new feature Widget support. You can setup 8 different health related widgets on your iPhone. You can also customize the color of the widgets to match your look.

You simply generate a PDF that can be exported to the Files app and sent to a doctor using the built-in sharing features in iOS. Or, save your data in a CSV file (you can customize and reorder the columns) which can be easily processed in desktop apps like Excel or Numbers. With the new Shortcuts integration, you can setup an automation to generate reports automatically, for example every month.

?It takes advantage of the data captured by your Apple Watch and other smart health devices, like blood pressure monitors or blood glucose meters that's already stored in the Health app, but you can input data manually as well.

Viszt explains what motivated him to write this app:

"Last December, I was at the doctor's office and my doctor noticed I was wearing an Apple Watch. He asked me if I could share the data collected on the watch with him. I went into the Health app and ended up looking for a share option for a few minutes. Turns out there's no way to export data in a readable format. The best I could do was to create a screenshot. So I started learning iOS development and Swift to create an app that generates a PDF report which can be shared with anyone easily."

The app already earned appreciation from its users:

"I was looking for an easy way to get data out of Apple Health to send to my doctor and this app was perfect! Its data and presentation are clear and beautiful! Thank you so much for making this app!?"

"My Uncle needed to share his Apple Watch heart data with his doctor and this app was PERFECT! Kudos to the developer for creating such a cool and useful app."

Heart Reports Features

- * Export an excel file or show data on a PDF report about your heart rate
- * Detailed sleep report with sleep phases, in bed, asleep and awake times with corresponding heart rate and nutritional intake values
- * Detailed graphs for a quick overview
- * Blood pressure and blood sugar reports with nutritional intake details and

prMac: Publish Once, Broadcast the World :: <http://prmac.com>

classifications

- * Summary of high and low heart rate notifications
- * Activity report with step count, burned calories and body weight trends
- * Blood Oxygen report

Device Requirements:

- * iPhone, iPad, and iPod touch
- * Requires iOS 14.0 or later
- * 7.2 MB

Pricing and Availability

Heart Reports is \$2.99 USD (or an equivalent amount in other currencies) worldwide exclusively through the App Store in the Health and Fitness category. A limited number of Promotional Codes are available to members of the media.
