

Minder Softworks releases MYStuff 1.2 - Stuff Manager for OSX

Published on 11/12/09

Minder Softworks today announced MYStuff 1.2, an update to their handy "stuff manager" for OS X. MYStuff was developed to help people eliminate the paperwork clutter associated with the things they own, and take advantage of manufacturer's warranties. User can store information about the things they own as images, PDFs, and as manually-entered data. Version 1.2 adds an iPhoto browser palette and improved performance for large databases.

Columbus, Ohio - Minder Softworks today updated MYStuff to version 1.2, adding a location filter bar, CSV export, and improved drag and drop to the application. Designed to be the first "stuff manager" for OS X, MYStuff combines the best features of PDF managers and home inventory programs. MYStuff gives users an intuitive way of filing and finding their information.

MYStuff makes it easy to file and find information about the things you own. You simply make a new record, and key in what you bought, where you bought it, how much you paid and how you paid for it, warranty information, and other key data. Then you can add an unlimited number of files to the record: a scan of the receipt, photos of the item, a PDF of the manual, and anything else you would like to add. To make this process easier, MYStuff's MYInbox feature allows users to quickly add files to MYStuff from other applications.

MYStuff 1.2 adds a FileFinder palette which allows users to easily browse photos in their iPhoto library without leaving MYStuff. Photos can then be dragged from the palette directly to MYStuff, making it easy to create a new record or add to an existing one.

Also in the update are some under-the-hood improvements to increase the performance with large databases, improved CSV export, and some minor bug fixes. In addition to these new features, MYStuff allows you to easily back up your data, print lists for insurance claims, and view your records as lists or as images.

MYStuff will immediately draw comparisons to popular PDF- and note-managing applications, home-inventory applications, receipt-tracking applications, and warranty-tracking

managers concentrate on allowing users to file and find documents, but provide no way of entering information about individual items. Home inventory programs allow tracking information about individual items, but provide little or no way to track the documents about the item. MYStuff has all the best features of each of these applications, and puts them in a simple, easy-to-use interface.

Every year, people throw away countless products that are still covered by a warranty. Most often, they are unaware that the product is still under warranty because they cannot find the receipt and warranty information from the time of purchase, which may have been a year ago or maybe ten years ago. As a result, they replace an item that could have been repaired for free, thus costing them money. Keeping important paperwork organized is a tremendous amount of work, which explains why so few people do it. MYStuff helps users file and find their information quickly and easily, saving them both time and money.

Minimum Requirements:

* MYStuff will run on any Intel or PowerPC Mac running OS X 10.5.8 or later, including Snow Leopard

Pricing and Availability:

A free demo is available from the website. A full license can be purchased for \$29 (USD).
