

HoudahGeo 1.2.8 - Photo Geocoding for the Mac

Published on 09/24/07

Houdah Software Software has updated HoudahGeo to version 1.2.8, their one-stop geocoding application for Mac OS X. HoudahGeo allows users to link, or "pin" photos to the location where they were taken, without the need of a digital camera with built-in GPS or a GPS device. This information may then be exported to EXIF tags, as well as to Google Earth KMZ files. Such a file allows for browsing photos within Google Earth. Version 1.2.8 adds a number of new features.

FOR IMMEDIATE RELEASE

Luxembourg - September 24, 2007 - Houdah Software has updated HoudahGeo to version 1.2.8, their one-stop geocoding application for Mac OS X. HoudahGeo allows users to link, or "pin" photos to the location where they were taken, without the need of a digital GPS camera or a GPS device. This information may then be exported to EXIF tags, as well as to Google Earth KMZ files. Such a file allows for browsing photos within Google Earth.

HoudahGeo is a pure software solution for geocoding photos with latitude, longitude and altitude information. Just like a GPS camera, HoudahGeo can store this information right within the image file, invisibly with no loss of quality. Unlike a GPS camera however, HoudahGeo allows the direct export photos directly to Google Earth.

HoudahGeo may operate in a fully automatic mode when provided a track log file from a GPS receiver. Finer control is possible by attaching photos to waypoints created using a GPS device. When no GPS device is available, manual geocoding is possible through integration with the Google Maps service.

New Features, Enhancements and Fixes:

New feature: It is now possible to copy coordinates from one image to another.

Enhancement: The map window now loads significantly faster.

Enhancement: The map window now remembers settings from previous use.

Enhancement: Image previews are now faster to load.

Enhancement: The automatic geocoding algorithm has been improved and allows for command line fine tuning.

System Requirements:

- * Mac OS X 10.4.8 or later
- * Universal Binary for PowerPC & Intel
- * Digital Camera and optionally a GPS device
- * 22.3 MB Hard Drive space.

Pricing and Availability:

HoudahGeo 1.2.8 may be purchased for \$29.95 USD for single user license. A full-featured demo version is available for download from our web site.
