

Freeridecoding updates BurnAgain DVD, adds Leopard compatibility

Published on 09/26/07

Freeridecoding today updated the CD and DVD multisession burning tool BurnAgain DVD to v1.2.1, adding Leopard compatibility, several bugfixes, overall improvements and chinese localisation. BurnAgain DVD is an easy to use multisession burning tool for Mac OSX. BurnAgain DVD simply adds files to a disk several times without creating an individual volume for each session. If items are burned again BurnAgain DVD automatically only adds new or changed files.

Freeridecoding today updated the CD and DVD multisession burning tool BurnAgain DVD to 1.2.1, adding Leopard compatibility, several bugfixes, overall improvements and chinese localisation.

BurnAgain DVD is an easy to use multisession burning tool for Mac OSX. BurnAgain DVD simply adds files to a disk several times without creating an individual volume for each session. If items are burned again BurnAgain DVD automatically only adds new or changed files. BurnAgain DVD allows to change the title of the disk at each burn, hiding of previously burned sessions and preserves all HFS specific attributes (resource forks). It supports the use of Aliases and Tigers "Burnable Folders".

BurnAgain DVD supports burning to CDR,CDRW,DVD+RW and DVD-RW. It is the only application on the Mac available supporting that kind of multisession burning.

Licenses: Single 17 Euro (USD 23.80) , Family Pack 34 Euro (USD 47.20)

If you would like to test BurnAgain DVD for a review, press licenses are available upon request.
