

## Automatically hide applications not actively in use

Published on 11/25/09

Pariahware, Inc, today announced Shoo Apps 1.1, an update to its menu bar utility for Mac OS X. Shoo Apps allows per-application granularity for hiding inactive applications in order to help keep your workspace uncluttered. With Shoo Apps, the user can choose to have all inactive applications hide at the same time or give each individual application its own interval. Options for hiding range from hiding immediately to not hiding at all.

Raleigh, North Carolina - Pariahware, Inc, a consulting firm and shareware developer, has announced today it is shipping Shoo Apps v1.1, a menu bar utility that allows per-application granularity for hiding inactive applications, in order to help keep your workspace uncluttered. With Shoo Apps, the user can choose to have all inactive applications hide at the same time or give each individual application its own interval. Options for hiding range from hiding immediately to not hiding at all.

"We are pleased to be offering this new version of Shoo Apps ready for the public", stated Christian Miller, President of Pariahware, Inc. "In addition to ensuring that Shoo Apps is functioning correctly for Snow Leopard, we have also giving the application an improved user interface. And of course Shoo Apps is still fully compatible with Leopard."

New in this version is:

- \* Improved user interface
- \* Full compatibility with Mac OS X 10.6
- \* Improved compatibility with Mac OS X 10.5
