

## **Slife Labs Unveils Slife 1.3**

Published on 10/03/07

Slife Labs today unveiled Slife 1.3, the most significant upgrade ever to the innovative time and activity tracking tool for the Mac OS X. Slife 1.3 now supports all Adobe CS3 applications, features an auto-discovery mechanism for tracking applications, and includes a new visualization.

### **FOR IMMEDIATE RELEASE**

Atlanta, GA - October 2nd, 2007 - Slife Labs today unveiled Slife 1.3, the most significant upgrade ever to the innovative time and activity tracking tool for the Mac OS X. Slife 1.3 now supports all Adobe CS3 applications, features an auto-discovery mechanism for tracking applications, and includes a new visualization.

At the heart of Slife 1.3 lies an improved mechanism for application tracking, which includes auto-discovery of previously unsupported programs and enhanced performance. New applications are now fully supported as well, most notably Adobe CS3's suite of creative tools comprising Adobe Photoshop CS3, Adobe Illustrator CS3, Adobe InDesign CS3, Adobe Fireworks CS3 and several others.

Unlike previous versions, Slife 1.3 can be completely hidden from view while operational and is much more integrated with the Slifeshare service. The new Friends View allows users to visualize the activities of their Slifeshare friends, colleagues and communities in real-time.

"We've taken Slife to a whole new level of feature support, stability and performance with this release. ", said Edison Thomaz, Slife Labs founder and CEO. "There's no better way to keep track of your computer activities and productivity".

#### **Pricing and Availability:**

Slife 1.3 for Mac OS X can be downloaded today at the Slife Labs web site. Slife can track up to 3 applications at a time for free and an unlimited number of applications when customers purchase a license, which can be purchased for US\$34 at the Slife Labs online store.

#### **Requirements:**

Slife 1.3 requires Mac OS X 10.4 (Tiger) or later and at least 512MB RAM (1GB RAM recommended).
