

Near Real Time Traffic and Weather Data from Traffic Info Map USA 1.2

Published on 11/30/09

c0deart LLC today released Traffic Info Map USA 1.2 for iPhone and iPod touch users. Traffic Info Map USA was designed to quickly deliver text-based traffic information. The app is a portable traffic and weather report with near real time data for any zip code in the country. This helps users to avoid road closures, accidents, detours and other traffic related snafus on their travel route. With this newest version, the app does even more.

Waretown, NJ - Announcing that c0deart LLC, the developers of Traffic Info Map USA, has released the latest updated version of the application. The app is a portable traffic and weather report with near real time data for any zip code in the country. This helps users to avoid road closures, accidents, detours and other traffic related snafus on their travel route. With this newest version, the app does even more.

Traffic Info Map USA was designed to quickly deliver text-based traffic information. The app uses Yahoo! Traffic RSS feed API to retrieve traffic data for most metropolitan areas in the United States.

While most cities get near real-time coverage, others are less frequently updated, depending on their location. C0deart has resolved this by supplying a convenient zip code checker on their website that details what coverage is available for the zip code a traveller is going to. Coverage is then known before hitting the road.

Regardless of traffic coverage, Traffic Info Map USA delivers real time reporting of a user's speed, direction, altitude and co-ordinates.

In fact, Traffic Info Map USA has a list of great useful features beyond simple traffic and weather reporting:

- * Highly customizable (more than 6 types of preference)
- * You can access to any traffic and weather report at the ZIP code level for the US Only
- * A ZIP Finder is implemented for any city name that you want access beside your current position
- * You can access at Traffic and Weather report in the same area for a better analysis of your current conditions
- * The map toolbar allows you to handle any map navigation faster than ever
- * The landscape format of the map screen is optimized to visualize more information
- * You can choose your starting mode screen (List or Map) in the Options menu
- * Even if your traffic and weather data are not available at your current time and preferences, you can still use the app for your current position real time data (Altitude, Speed, Direction, Coordinates)
- * XML Synch with Yahoo Traffic
- * XML Sync with Yahoo Weather
- * Embedded map (Mapkit Framework)
- *
- * iPhone / iPod OS 3.0 with an internet connection. Works fine even at Edge level

Traffic Info Map USA uses an easy color coded system for instant information relay.

About Traffic Map Info USA

Traffic Info Map USA is a near real-time portable traffic and weather report you carry with you everywhere you go. With Traffic Info Map USA on your iPhone or iPod Touch, you can know what others don't and avoid that traffic tie-up, know the weather at your destination and receive real time data about your speed, direction, altitude and co-ordinates.
