Manage passwords inside a protected document using a master and details view. Password Repository was designed to be simple, stable, effective and reliable. Version 2.3 adds new features and other improvements.

### IMMEDIATE RELEASE

Milano, Italy - October 7, 2007 - Tension Software announces Password Repository 2.3, a native Mac OS X program to manage general use passwords stored inside protected documents accessible only by the user. Manage passwords inside a protected document using a master and details view.

Password Repository was designed to be simple, stable, effective and reliable. Password Repository shows data in a table view and let the user order items by any columns with just a click. It uses categories with custom color labels to help store passwords in structured and smart way.

Any content is searchable using category and search field with data displayed as-you-type. Export and import of data via text files. It manages an unlimited number of documents with unlimited number of passwords. It can open a default document at startup with most used passwords. Data are saved on disk automatically encrypted using Blowfish algorithm and are unreadable without opening them with the right password.

The owner of the data is totally safe in case the computer is lost and there is a serious risk related to the content of the data (bank account passwords and so on) because all the content inside Password Repository documents is strong encrypted by default and no one can access it without the right password. Password Repository was thought to be simple, stable, effective and reliable, a tool the user can trust.

### Feature Highlights:

- \* New Search Info display
- \* New 'Instant Lock' feature
- \* New 'Opening Sort by' feature
- \* Improved VoiceOver support

### System Requirements:

- \* Mac OS X 10.4 or later (Universal Binary)
- \* 896 kb RAM

### Pricing and Availability:

Password Repository 2.3 can be purchased for \$25.00 USD. A full-featured demo is available.
