Raleigh, North Carolina - Server Solutions Group has announced the release of its iPhone
b
feature-rich reading light! Designed to allow you to read in bed without disturbing your
spouse, the reading light provides enough light to read your favorite book for hours.

M
included the ability to change the bulb color between white, yellow, blue, or red.
Personally, we prefer the white bulb. In addition, we have added a sleep timer. The last
thing we wanted was to wake-up in the morning with a dead battery because we fell asleep
while reading! Finally, we also included a low battery alert; just in case.

Feature Highlights:

- * Adjustable brightness via a simple swipe of your finger either up or down on the display
- * A changeable light color on the Preferences tab
- * A built-in sleep timer so you don't have to worry about falling asleep with your iPhone or iPod touch still on
- * Sleep timer chime when time is up with an easy cancellation via a simply shake or touch of the cancel timer button
- * Low battery alert

Device Requirements:

- * iPhone or iPod Touch 3.0 or later

Pricing and Availability:

?
Store in the Utilities category. While it is our desire to provide a useful and practical
reading light, we encourage any and all recommendations toward the improvement of this
application.
