

Tension Software releases Mac Shutdown X 1.2

Published on 10/15/07

Mac Shutdown X is a small utility designed for Mac OS X to shutdown the Mac after a big file download or at the time you specify or on other events. It can help a user start a download of big files over the net and have the Mac automatically turned off when the download is finished in the night. It is customizable using a easy to use setting setup panel (no coding or editing of script required). It's small, fast, simple and reliable.

Mac Shutdown X is a small utility designed for Mac OS X to shutdown the Mac after a big file download or at the time you specify or on other events. It can help a user start a download of big files over the net and have the Mac automatically turned off when the download is finished in the night. It is customizable using a easy to use setting setup panel (no coding or editing of script required). It's small, fast, simple and reliable.

The user can choose to shutdown the Mac:

- * On a scheduled plan
- * On a specific date and time
- * When a generic file is removed or moved on your Hard Disk

When a download is finished:

- using Safari
- using Firefox or Camino or Netscape
- using Speed Download
- At launch time to use it via Apple iCal

Mac Shutdown X is the successor on Mac OS X of our old Shutdown Controller for Mac OS Classic but has not a single line of code in common with the old Shutdown Controller. It is native and was entirely rewritten on Mac OS X for Mac OS X using Objective-C and Cocoa. The result is a pleasant, small utility that does its job in a simply and elegant way.
