

EDUmobile gives Student Community Free 1-on-1 iPhone Course Tutorial

Published on 12/14/09

EDUmobile today announced they are now offering their iPhone development course for free to the first 10 early bird students, on a first-come first-served basis. To avail of the offer, the student must currently be enrolled in any school or college across the globe. Students, simply need to enter the promo code STUDENTOFFER while registering, and they must have a .edu email address and/or provide proof that they are in college.

Mumbai, India - EDUmobile, the Mobile Training Lab behind the world's most popular Online One-on-One Interactive iPhone Course with over 150 students in live training, is now offering the course for free to the first 10 early bird students. To avail of the offer, the student must currently be enrolled in any school or college across the globe. Students, simply need to enter the promo code STUDENTOFFER while registering, and they must have a .edu email address and/or provide proof that they are in college.

Recently, there has been a sudden spike in demand for iPhone development skills, at a global level. The increased demand replicates the demand for website developers when the Internet quickly became mainstream over 15 years ago. Students who move early and acquire iPhone Development skills, can add significant value to their profile and resume, thereby ensuring higher paying jobs. Alternatively, students in schools and colleges all across the globe may directly publish their own iPhone Apps on the Appstore, and thus open up a revenue stream to earn money directly from Apple Inc, while still in pursuit of their educational goals.

"There have been many successful stories of young students receiving hefty revenue checks from Apple, for their successful iPhone Apps. Our Interactive iPhone Training Program has been very well received by the development community at a global level, and we are getting candidates from all parts of the globe. We felt that we should give back to the student community in some way, and also simultaneously create awareness in the student community that our course can be done on the side, while attending school or college." said Vishal Lamba, co-founder of EDUmobile. "It could make great pocket money for almost any student. But, if you have a unique App idea, and you're smart and creative - you could end up with a significant pile of cash! So, if you have an iPhone App idea, but did not know where to begin, there couldn't be a better time to get started."

EDUmobile is offering the course complimentary to the first 10 early bird students, on a first-come first-served basis. To check availability, simply enter the promo-code STUDENTOFFER, while signing up. If there are open slots, it will reflect on the screen and you will have secured your complimentary seat. Students who register late, may still enroll and avail of a 60% discount on the full price of \$200, by using the same promo-code. The 60% promotional discount offer for students (that is, \$80 fee for the full course) will be taken down after 100 students enroll.

The offer has been introduced to acknowledge that there are many students attending schools and colleges across the globe, who simply cannot afford the high training fees to learn iPhone programming.
