

## **E2D introduces songvoo Free with Landscape mode and Twitter Integration**

Published on 12/15/09

Hollywood based Elements2Dance today is excited to release songvoo free, their updated iPod music player app for iPhone and iPod Touch. This update adds many groundbreaking features including Twitter integration, auto-tweet, landscape mode, custom user-backgrounds, song sharing and discovery, and is now available as a free download. songvoo serves as a great companion for both casual user and music professionals alike, or anyone who has a large, constantly changing music collection.

Hollywood, California - Elements2Dance (E2D) today is proud to introduce songvoo free, their music player for iPhone and iPod Touch. Developed specifically to leverage the iPhone's unique capabilities and interface, songvoo uses the entire display for the song title and artist of the current playing song. songvoo serves as a great iPod companion for both casual user and music professionals alike, or anyone who has a large, constantly changing music collection to stay on top of.

Twitter and Facebook enabled: songvoo lets the user share his currently playing song info on Twitter and/or Facebook. Keep your friends updated with what you are listening to. New auto-tweet mode does this automatically if you desire. Custom backgrounds- In addition to the many great looking backgrounds already included, the user can now choose his or her own custom background from their photo library, or photograph a new one if their device has a camera. Landscape Mode and Auto-Orientation uses the devices accelerometer to change the layout based on the orientation of the device, and each position can be locked on or off in case you need to force a certain orientation.

Perfect for jogging, driving, and many other active diversions, the large, easy-to-read display shows at-a-glance exactly what song is playing and who the artist is. songvoo will look great in a car-mount or speaker dock. It even responds to all external remote controls like next song, previous song, pause, and play, including control from Apple's earbud remote.

songvoo features intuitive, yet incredibly useful controls that work great no matter what the users orientation is to the screen, such as when the device is in an armband, or even when driving. All Gestures also work in any orientation, just tap once to play or pause, swipe or double-tap the screen to go to the next track, or go to the previous track with a triple-tap or arrow gesture (<). songvoo also shows elapsed and remaining time for the currently playing track, along with a slider that can be used to skip sections or replay a certain part. The interface elements can also be faded out while music is playing to further reduce distractions. You can activate song shuffle by holding a thumb on the screen and shaking the device.

Intro-Intro Skip lets you skip a user-defined amount from the beginning and end of each track. People who need to go through a large amount of music in a short amount of time will appreciate this feature that lets you get to the "meat" of each track quickly. The song info screen lets you see all of the meta data associated and available for the current track including the album art, rating, composer, disc number, and includes music discovery features that help you find the current artist on major music sites, and search for lyrics.

"I developed songvoo originally to fill a need for my own enormous and constantly growing music collection." said Jokton Streatly, resident DJ of E2D. "The included iPod app was not enough for my needs because the text seemed too small, and song names and artists appeared cut off for lack of space because the album cover art was so big. I also felt that the interface needed to be more fun and look stylish. Apple opening up version 3.0 of the

iPhone OS allows so much more freedom. Although created for music professionals, songvoo allows for extensive user customization which should also appeal to a wider audience."

Users can choose a new playlist (or songs) from their iPod library at any time, as well as choose music in the iPod app if they prefer, and bounce back and forth between apps with no problem. Additionally, it is possible to personalize songvoo. Change font, colors, background image, or enable the shake to randomize feature and set these automatically.

**System Requirements:**

\* Original iPhone, iPhone 3G, iPhone 3GS, iPod Touch 1st or 2nd Generation, with OS 3.0 or later
