

Braglt HTML Slideshow 1.2 Released - Expanded Compatibility

Published on 01/01/10

Braglt has released Braglt HTML Slideshow 1.2, a plug-in to Adobe Lightroom. Perfect for those who want to publish a collection of photos to the web like a slideshow, telling a story. New in v1.2 is support for Internet Explorer 6. This makes it compatible with Lightroom under Windows when Internet Explorer is left at version 6, since Lightroom renders web content using Internet Explorer, even if another browser is installed. Now also supports slideshows without a collection description.

Stockholm Sweden - Braglt releases update 1.2 of 'Braglt HTML Slideshow', a plug-in to Adobe Photoshop Lightroom. It's for people who want to publish a collection of photos to the web like a slideshow, telling a story. Visitors to the website can scroll through thumbnails of all photos, and then start the slideshow to see large photos sequentially with annotations below each photo.

The viewer is in full control of when to see the next photo, and it does not require any Flash plug-in. Since the slideshow is based on HTML, it's fast and requires no browser plug-ins. The slideshow has a scrolling index page of all photo thumbnails, an identity plate, and an introductory description. The full frame version of each photo can have multiline captions in a compact design to make room for photos in both landscape and portrait orientation with separate bounds for width and height. When a full frame photo is clicked, it advances to the next full frame photo. The plug-in has extensive choices for text labeling, fonts, layout and color controls.

New in this version:

* Now supports Internet Explorer 6. Thereby, it is compatible with Lightroom under Windows when Internet Explorer is left at version 6, since Lightroom 2.x on an XP installation always renders web galleries using Internet Explorer, even if another browser is installed. (It is quite common that people may have the latest version of Firefox, but Internet Explorer is left at version 6 and that's what Lightroom will use to render html content inside Lightroom.)

* Now supports empty 'Collection Description'. When the Collection Description is left empty, the two dotted lines above/below the description are automatically removed, and the empty space is reduced, to make it cleaner.

Pricing and Availability:

You can download a demo version that is free to use as much as you like, but it is limited to 10 photos. For use with more than 10 photos, purchase an unlocked version for only EUR 8 (about USD 11.50) - that's 20% off regular price.
