

MildMannered Industries Announces Baseline Public Beta

Published on 10/25/07

MildMannered Industries has announced that the Baseline public beta is now available. Baseline is a disk sizing application that allows users to compare their disk against previous scans, making it easy to see where their disk space has gone.

FOR IMMEDIATE RELEASE

MildMannered Industries has announced that the Baseline public beta is now available. Baseline is a disk sizing application that allows users to compare their disk against previous scans, making it easy to see where their disk space has gone.

"Most Mac users dread the 'Your Startup Disk is almost full' alert." said Martin Redington, founder of MildMannered Industries. "Baseline is a disk sizing application that not only tells you how much space each file or folder takes up on your disk, but also allow you to see what has changed since you last scanned the disk".

"You can also opt to see only the files that have changed, which makes it vastly easier to work out where your disk space has gone. Users can also delete, compress, or archive files directly from within Baseline, making tidying up your disk a snap".

Baseline features:

- * Superfast Disk Scanning.
- * Compare Disks against saved Baselines.
- * View only the items that have changed.
- * Delete, Compress, or Archive items from within Baseline
- * Leopard Compatible

System Requirements:

Baseline requires Mac OS X Tiger or Leopard.
