

Demo your iPhone Optimized Websites - WebPresenter

Published on 01/06/10

Sydney based Lilliput Labs Pty Ltd today announces WebPresenter 1.0 for iPhone and iPod touch devices. WebPresenter allows web developers and designers to demo their iPhone optimized websites running on an actual iPhone or iPod touch for the first time. Using the open VNC protocol, wirelessly connect your iPhone or iPod touch to a computer and stream the rendered website using the iPhone's built in WebKit browser to that computer.

Sydney, Australia - Lilliput Labs Pty Ltd today announces the release of WebPresenter 1.0, allowing web developers and designers to demo their iPhone optimized websites running on an iPhone or iPod touch device for the first time. Using the open VNC protocol, WebPresenter lets you wirelessly connect your iPhone or iPod touch to a computer and stream your rendered website using the iPhone's built in WebKit browser to that computer.

The mobile web is growing significantly, with mobile web pageviews increasing globally by 148% from December 08 to December 09 according to Quantcast. The iPhone and iPod Touch presents the lion's share of this usage, with 65% of North American mobile web requests coming from these two devices.

The growth of mobile web usage, as well as the introduction of new HTML5 features, such as location support, in mobile web browsers, is spurring an increased interest in mobile web development. WebPresenter is designed to make it easier to for those creating mobile websites to showcase their websites to their full potential.

Device Requirements:

* iPhone and iPod touch 3.0 or later

Pricing and Availability:

WebPresenter is available for free through the App Store in the Business category. This free version watermarks the VNC images, in order to remove the watermark you can upgrade to the pro version via in-app purchase.
