

Total Blockout 1.2.0 App - Cerebral Stimulation Improves Brain Power

Published on 01/07/10

Sky Games LLC today released Total Blockout 1.2.0 for iPhone and iPod Touch users. Total Blockout offers stimulation, which helps to improve brain function through the use of strategy development within a fun game atmosphere. Logical and analytical skills are naturally enhanced while finding a polymino puzzle solution. Total Blockout can help children increase spatial attribute development, while teenagers will experience an advantage in logic and strategic learning from playing the game.

Waretown, NJ - Announcing that Sky Games LLC, the developers of Total Blockout, has released an addictively entertaining game app that benefits players. Total Blockout offers stimulation, which helps to improve brain function through the use of strategy development within a fun game atmosphere. Logical and analytical skills are naturally enhanced while finding a puzzle solution.

Total Blockout was developed to be the fun and challenging app that it is. The additional benefit of increasing cerebral skills is a natural by-product, thanks to the strategy required to find solutions for the polymino-styled, abstract puzzles.

Successful game play requires exceptional spatial skills, yet the app is adaptable enough that people of all ages can tackle the puzzles to reap the benefits. Some people will need more practice than others but all serious attempts stretch a user's brain capacity in a good way.

Total Blockout can help children increase spatial attribute development, while teenagers will experience an advantage in logic and strategic learning from playing the game. The cerebral stimulation of regularly playing Total Blockout can even help seniors keep their minds and memories sharp.

What makes Total Blockout unique from other, similar apps is its need for players to develop single-move strategies in line with an overall game plan. Constraints are placed in the selection of pieces available during a turn, requiring extraordinary memorization of pieces used in previous moves. No doubt about it, Total Blockout is a real brain workout.

To further exercise a user's mental abilities, gamers can compete online with other players to challenge what they've learned, as well as to observe new strategies that may be beneficial to their own playing. There are many solutions to the Total Blockout puzzle. Finding the most perfect one will require users to work their cerebellum, as they develop winning strategies to solve the puzzle and keep their brain fit.

About Total Blockout

Although Total Blockout was designed with entertainment in mind, the developers came to recognize the multiple benefits this game app offers to all who play. The game is adaptable to people of all ages. Children can benefit from the development of spatial attributes, configuring sizes and shapes within borders. Teens can develop early logic and strategic abilities, exercising the mind while common video games offer little, if any, mental growth. Adults can take the challenge themselves or compete with others across the globe to learn new approaches to strategy. The elderly can also benefit by regular play, prolonging, if not preventing, the deterioration of memory and other cerebral functions.

Device Requirements:

- * iPhone or iPod Touch 3.0 or later
- * BB Storm > 9500 (9530, 9520)
