### FOR IMMEDIATE RELEASE

Swansea, United Kingdom - February 12, 2007. Reinvented Software is proud to announce the release of Keep It Together 1.3 for Mac OS X, an application that lets you keep everything you need in one place, organize it in the way you want and find it again instantly. KIT 1.3 introduces the ability to tag and rate items, print PDFs directly from other applications, updated user interface and much more.

KIT is a magic scrapbook for everything you want to keep. Text, documents, images, movies, sounds, web pages and bookmarks can all be dragged to KIT for safe keeping, previewed, collected together in different ways and found again immediately.

Introduced in August 2004, KIT has a different take on traditional organizers, focusing on making storage and retrieval effortless rather than require everything be organized into complicated hierarchies; but KIT has a few tricks up its sleeve there too. Files can be color-coded with categories, tagged, rated and sorted into groups; unlike folders, these work like iTunes playlists so that a file can exist in more than one group at a time. KIT's smart groups will do all the hard work of staying organized for you.

KIT shows previews for most popular file formats, meaning you don't have to open other applications to review files. KIT also creates and saves bookmarks and web archives. KIT will save whole or portions of web pages that preserve all the original links and content and works with popular web browsers such as Safari and OmniWeb. KIT indexes the contents of all kinds of files so they can be found again as quickly as you can type.

#### New features in 1.3:

- Files can now be assigned searchable tags
- Files can be rated with up to 5 stars
- Save to PDF from other applications
- A customizable shortcut key to make KIT the active application
- Added Web preferences for controlling the content displayed in previewed web content
- Previews of source code files
- Updated and improved UI
- Support for Growl - <http://growl.info>

KIT 1.3 requires Mac OS X 10.4 or later, is priced at \$24.95, and is a free upgrade for all registered KIT 1.x users. Educational discounts are also available.
